SUMMARY

Computer Engineering student graduating June 2026, currently interning as a Frontend Engineer at NetworkX.ai (remote, US-based). Built 3 full client websites and 2 landing pages from scratch; optimized an existing production platform for performance; and implemented JWT authentication with Axios interceptors and REST API integration. Expanding into fullstack and AI-driven product development, with hands-on experience in reinforcement learning and multimodal AI pipelines.

EDUCATION

Bahcesehir University Istanbul, Turkey
Computer Engineering Expected Graduation: June 2026

Relevant Coursework: Artificial Intelligence, Deep Learning, Web and Mobile App Development, Multimedia Systems, Formal Language and Automata, Statistics, Analysis of Algorithms, C++, Python, Java

TECHNICAL SKILLS

Programming: Python (Intermediate), JavaScript, TypeScript, HTML, CSS, Java (Project-based), C++ (Project-based)

Frontend: React.js, Next.js, Tailwind CSS, Vite, React Hook Form, Figma, Responsive UI Development

Backend and APIs: Node.js, REST APIs, Axios, JWT Authentication, Axios Interceptors, HTTP-only Cookies

AI and Engineering: Reinforcement Learning, Computer Vision, Collaborative Filtering, LLM Prompt Engineering, OOP

WORK EXPERIENCE

NetworkX.ai Remote, New York, USA
Frontend Development Intern February 2026 - Present

- Built 3 full client websites and 2 landing pages end-to-end, translating Figma designs into production-ready code.
- Implemented JWT authentication with Axios interceptors, protected routes, and secure token refresh flows.
- Integrated REST APIs for form submissions and dynamic data fetching, managing async state and error handling.
- Optimized an existing production platform for performance, reducing load times and improving component efficiency.
- Developed and maintained reusable React and Next.js components with Tailwind CSS across multiple client projects.

Bahcesehir University Istanbul, Turkey
Erasmus Office Assistant September - December 2024

- Assisted international students with Erasmus processes, demonstrating strong communication and attention to detail.

PROJECTS

Webinar Landing Page | React.js, Next.js, Tailwind CSS February 2026

- Built a fully responsive landing site for NetworkX.ai, translating Figma designs into production-ready code using React, Next.js and Tailwind CSS.

Highway Reinforcement Learning Agent | Python, Stable Baselines3, OpenAI Gym December 2025

- Trained a Deep RL agent to navigate multi-lane highway scenarios, optimizing reward shaping for improved collision avoidance using Stable Baselines3.

Sentia-Vision | Python, MediaPipe, Whisper, FastAPI, React, Tailwind CSS May 2026

- Built a multimodal AI pipeline detecting emotional incongruity in UX recordings, with a Truth Score algorithm and FastAPI and React dashboard for UX researchers.

CERTIFICATIONS

Supervised Machine Learning: Regression and Classification - Stanford Online and DeepLearning.AI
C++ Basics: Selection and Iteration - Codio via Coursera
